

If you go to the foundation's website www.ncrf.org you will see choices on the left side:

The “**Primary Discussion**” describes the biochemistry of what causes cancer and other conditions relative to the nervous system. You may need to read it a few times to best understand it.

The “**Illustration**” section shows the nervous system and how the other conditions are relative to the same nerve root. The hubs are the primary source affected by the deficiency. Genetics will determine how the body will respond to the deficiency, as each person's genetic character description is different, therefore we each have different vulnerabilities and strengths.

The “**Testimonial**” section will give you two choices:

Cancerous conditions, including the available documentation.

Non-cancerous conditions, including the available documentation.

In addition, while at www.ncrf.org, if you choose “**Discussion Board**” there are other cancer patients trying to get the discussion board better utilized for all, Recently, cancer patients are encouraging others to utilize it.

If you would like more detail on the vitamins, the Collect website: www.collect.org You can get the list of minerals and vitamins from there if you do not want to purchase from them, they will gladly give you the list to purchase from your store of what you need of what ever brand you want..

The following is taken from the NCRF website and the booklets that they have to describe cancer:

Pancreatic Cancer

We believe that all cancers are the result of a nutritional deficiency to the nervous system, the result is a neurological deficiency. This causes a change in biofeedback communication, all cellular nutrition, DNA replication and cellular manufacture. Upon, correcting these deficiencies, the body will function in a normal manner, resulting in normal cell function, the cancer cells will no longer be able to survive and die off.

The nervous system is comprised of the nerve cells as we know them, hormones, and lymph nodes. Their functions are interactive, however, the medical field does not acknowledge this involvement or incorrect involvement due to nutritional deprivation as the cause of many illnesses. As a result, the nervous system is further starved by conventional treatments, hindering the progression initially, the body re-evaluates the environment and produces new cells in response to the further depleted environment. The doctors state that the “cancer is now more aggressive” instead of understanding the concept we derived. We found that proper nutritional restoration to nervous system and cell nutrition throughout the body causes corrective domino - effect reactions. Upon nutritional correction, the body resumes correct cell production. When environmental factors are correct, the body no longer manufactures the cancer cells, the existing cancer cells are no longer able to exist in the corrected environment and die in a natural manner, like algae in a swimming pool.

The high failure rate in treating cancer is due to treating symptoms and not the cause. The cause was never addressed nor corrected, the progress continues because nothing corrected the pathway. We are showing that if you correct the cause, the body will make the corrective steps, resolve the problem, and restore normalcy.

Our observations have provided interesting results which tend to confirm our unproven theories:

1. Those without previous therapy appear to respond to the nutritional program faster and more effectively.

2. Pancreas, and other-type cancer patients in general, never take into consideration that their diet and lifestyle requires attention and improvements. Pain is blamed on the cancer instead of the negative reactions caused by the food that they should not have eaten.
3. Dosage 6 or 8 showed dramatically better results than of dosage 4.
4. Pancreatic cancer patients with aortic/vein/liver involvement and without other previous treatments showed stable but slower improvements. In addition, they felt numerous improvements overall.
5. There is a strong correlation between Gemzar/ 5FU and ascites, toxicity, blood clots and depression.
6. Urine pH reflects the alkaline/acid chemistry. The diet and choice of foods will affect pancreatic progress/hinderance. The volume of correct nutrients is important. Some people incorrectly focus on pH only and regulate the nutritional intake by the pH, which is not a correct procedure. pH is an indicator reflecting many causes, it is not a symptom. When the urine pH is below 7.0, it appears that the body chemistry is more conducive to cancer cell survival.
7. We observed that CA19-9 cancer markers do not properly reflect cancer status. Chemical intervention such as Chemotherapy toxicity can cause false indications. At first, a chemotherapy is introduced to the body to kill cancer cells. After a few months, the body recognizes it as an un-natural chemistry, therefore, and invader. Over time, the responding immunity develops a chemistry to eliminate this “preditorial” chemistry (chemotherapy), rendering the chemo less effective. The enzymes and immunological chemistry eventually becomes picked up by the cancer marker as an indication of cancer. The marker shows increased numbers, which the doctors incorrectly interpret as cancer progression. In response, they add more chemo to overpower the advanced cancer progression. The chemo toxicity increases and a vicious cycle leads to the patient’s death. Meanwhile, an autopsy shows that there was no cancer evident.
8. Most of the pancreatic cancer patients on this program who did pass away died because of the other toxic treatments and incorrect diagnosis due to incorrect testing formats. While the doctors refer to the problems as “Cancer progression” , the accurate cause was chemo toxicity and/or morphine overdose, not cancer. Autopsies on many verified “no evidence of cancer.”

Summary

1. We believe that all cancers are the result of a nutritional deficiency to the nervous system, the result is a neurological deficiency. This causes a change in biofeedback communication, all cellular nutrition, DNA replication to altered structure, causing a change in cellular manufacturing instructions. Upon correcting these deficiencies, the body will correct the domino-affect responses and restore its function in a normal manner. The DNA replication and structure will be corrected, resulting in DNA restoring correct instructions along with correct biochemistry availability for the body to correctly manufacture cells and their cellular function will be restored to normal. The cancer cells will no longer be able to survive because the many corrected environmental factors within the body’s chemistry are now no longer correct for the cancer cells, they simply die off in a natural manner. There is no need to kill cancer cells, they die as a natural occurrence, like algae in a swimming pool.
2. The nervous system is comprised of: the nerve cells as, hormones, and lymph nodes. Their functions are interactive, however, the medical field does not acknowledge this involvement or incorrect involvement due to nutritional deprivation as the cause of many illnesses. As a result, the nervous system is further starved by conventional treatments, hindering the progression initially, the body re-evaluates the environment and produces new cells in response to the further depleted environment, which, in most cases, causes a more acidic environment, which increases cancer cell nutrition. As a result, the medical field implies the “cancer is now more aggressive” instead of understanding that their treatment may have

killed the initial cancer cells, but, they also manipulated the biochemical environment to nutritionally support the body to manufacture cancer cells more rapidly.

3. Killing cancer cells is not the answer because the cancer cell is the result of the problem, not the cause. Therefore, upon killing the cancer cell, you remove the evidence, AKA - the result of the cause, however, the cause was never addressed nor corrected. Because the cause was never corrected, nothing stopped the sequences that take place to manufacture the cancer cell. Therefore, the body continues to manufacture cancer cells uninterrupted. Over time, the body produces more cancer cells, the doctors then say, "Gee, it came back. How did that happen, we got all of it out !!" They did not realize that they removed the by product of the condition instead of the cause. Killing the cancer also weakens and kills normal cells too, nothing positive is gained.
4. We found that proper nutritional restoration to the nervous system and cell nutrition throughout the body causes corrective domino - effect reactions. Upon nutritional correction, the body resumes correct cell production. When the body's environmental factors are correct, the body no longer manufactures the cancer cells, the existing cancer cells are no longer able to exist in the corrected environment and die in a natural manner and are replaced by normal cells. When the cancer cells die, or go necrotic, they remain and show up on CT & MRI scans, however, PET scans indicate that they are dead cells. The body will eventually break them down, it takes time.
5. Standard cancer treatment's high failure rate is due to treating symptoms and not correcting the cause. If the cause is never addressed nor corrected, the progress continues because nothing corrected the pathway. In addition, most conventional treatments enhance the environment to cause more cancer production instead of reducing production.
6. We are showing that if you correct the cause, the body will make the corrective steps, resolve the problem, and restore normalcy. Cancer patients, in general, never take into consideration incorrect diet, lifestyle nor spinal dislocations. Preservatives in our foods prevent metabolism, when you eat that food, the body cannot metabolize it, therefore, although tasty, the nutrition is not absorbed. The depletion takes time to generate changes in effects. Exercise has been replaced by convenience, blood circulation is minimized and therefore, natural metabolism is reduced because of reduced exercise.
7. The body produces acid to break down all foods to simple sugar, high protein being the highest complexity to break down. Normal cells uptake a specific amount of sugar for normal metabolism. A cancer cell uptakes twice the normal amount for its metabolism. The old wives tale "avoid eating sugar because sugar feeds cancer" is misleading because avoiding sugar totally to "STARVE CANCER" also starves the normal cells more severely, resulting in additional biochemical stress to the body. Eat smart and use the "1900 Diet"- make believe the year is 1900, how did they prepare food back then?? Avoid anything preserved, salted, in a can, jar or sealed package. It is fine to eat the very few naturally preserved foods, there are not many naturally preserved. Avoid prepared food because they have flavor enhancers and preservatives to give a shelf-life. Avoid nutrition drinks such as BOOST or ENSURE because they contain the "B" vitamins and iron, which will accelerate cancer progression.
8. Avoid hydroponically grown food. Eat organically grown quality foods. The body requires 3 ounces of red meat weekly for enzymes. Some people replace with soy, a fad product which biochemically does not replace meat enzymes. A mixture of different meats and fish are best to get a more effective blend of proper nutrition. Cookies or cakes should be either freshly made or purchased at a bakery, if it goes stale in 2 hours, that is good. To minimize acid production, start meals with carbohydrates, then protein and finish with a carbohydrate. Coffee and chocolate are in the highest protein classification because of its bean character, caffeine is not the concern. Avoid caffeine-free because it is an acidic broken radical. Coffee should be eliminated totally, chocolate either eliminate or minimize. Avoid all alcohol, it reduces calcium metabolism, disrupts natural biochemistry, blocks nutrition to nerve cells and stresses the liver. Alcohol is advertised like it is a soft drink, yet causes major health problems.

9. Lactose intolerance is due to unbalanced biochemistry. Instead of masking the unbalance, it should be corrected. Whole milk is the most nutritionally valuable to drink, the feared issues are not accurate and there are important nutritional factors not found elsewhere. When the biochemistry is properly balanced, metabolism is automatically correct and the issues and concerns do not exist. Avoid Skim, Low-Fat, 2%, 1% and similar, there is no nutrition left because the current processing depletes the nutrition as part of the process. Metabolism is the problem, not fat.
10. Avoid nutritional supplements that replace chemistries that the body naturally manufactures. The body will recognize the supplement and interpret that the body has enough and shut down its own manufacture, which then depletes the natural supply and causes a short term benefit and long term increased deprivation.
11. Many people are told that their pain is due to cancer progression. In a large percentage of cancer patients, the pain is due to muscle spasms pulling a disc out of alignment, relative to nutritional deficiencies affecting nerves and muscles, resulting in pinched nerves. The spine is never attended to and the pain is treated as though it were cancer related, spurring a vicious cycle of incorrectly treating pain with incorrect treatments, causing a snow ball effect in severity without correcting the problem. We have seen patients who are receiving pain management go for a spinal alignment and walk out with reduced or no pain. Proper nutrition and spinal adjustments cause good results.
12. There is a strong correlation between Gemzar/ 5FU and ascites, toxicity, blood clots and depression.
13. Urine pH reflects the alkaline/acid chemistry. Saliva pH is not accurate for body chemistry indication because it reflects chemistry related to digestive biochemical responses and will change according to what the body senses as you eat, The diet and choice of foods will affect body pH and therefore influence progress/hinderance of metabolism. The volume of correct nutrients is important. Some people incorrectly focus on pH only and regulate the nutritional intake by the pH, which is not a correct procedure. pH is an indicator reflecting many causes, it is not a symptom. When the urine pH is below 7.0, it appears that the body chemistry is more conducive to cancer cell survival.
14. We observed that cancer markers do not properly reflect cancer status. Chemical intervention such as hormone or Chemotherapy toxicity can cause false indications in either direction. At first, a chemotherapy is introduced to the body to kill cancer cells. After a few months, the body recognizes it as an un-natural chemistry, therefore, an invader. Over time, the responding immunity develops a chemistry to eliminate this “preditorial” chemistry (chemotherapy), rendering the chemo less effective. The enzymes and immunological chemistry eventually becomes picked up by the cancer marker, and is interpreted as an indication of cancer. The marker shows increased numbers, which the doctors incorrectly interpret as cancer progression. In response, they add more chemo to overpower the “advanced cancer progression”. The chemo toxicity increases and a vicious cycle leads to the patient’s death. Meanwhile, an autopsy shows that there was “no evidence of cancer.”
15. Morphine generates an addiction. The body becomes calm at first, then the morphine effectiveness weakens, causing a stronger requirement for increased pain due to withdrawal symptoms. This gradually increases until the overdose causes biofeedback shutdown, the body shuts down and the person dies. Meanwhile, the family was told that the cancer became more aggressive and consumed the body. The accurate fact is that they turned the patient into a drug addict, requiring more morphine until they died from the overdose. The family becomes so distraught that they accept it and never question the accuracy nor do they request an autopsy to verify the statements.
16. Many of the cancer patients on this program who did pass away died because of the other toxic treatments and incorrect diagnosis due to incorrect testing formats. While the doctors refer to the problems as “Cancer progression”, the accurate cause was chemo toxicity and/or morphine overdose, not cancer. Autopsies on many verified “no evidence of cancer.”
